

Scented Colored Candle

# Scented Colored Candle

Four successful scents in their colored case.

1963 saw wax and perfume blend for the first time when diptyque introduced its first set of three scented candles, Aubépine, Thé, Cannelle (Hawthorne, Tea, Cinnamon).

Its know-how is unique, entirely manual, and each of the nine steps of production are carefully studied to result in excellence. We carefully select our mineral and plant waxes.

A wax-maker assesses each mixture and customizes them as needed. We only use the best candle wicks. Just like our eau de toilette, each scent has been carefully created with the utmost quality in mind. diptyque candles are made exclusively by hand, and take no fewer than 11 distinct operations.

Each candle is a creation in its own right. They are inspired by a childhood memory, nature or journeys. The colored candles are available in four of diptyque's most iconic candle fragrances, colored according to the scent: "red" Tubéreuse, "black" Baies, "green" Figuier and "grey" Feu de Bois.

diptyque uses hand-made mouth-blown glass to add a special touch to its range of scented, colored candles. The incandescent and soft glass paste is placed in a metal cast. It is blown until it espouses the shape of the mould, then turned to smooth its contour. The glass final color gels when it cools.

A luxury craft par excellence.

# “RED” TUBEROSE

floral

At dusk, the fragrance of these heady flowers intoxicates,  
captivates and beguiles.

# “BLACK” BERRIES

fruity

An armful of roses and of blackcurrant leaves,  
in homage to L’Ombre dans l’Eau.

# “GREEN” FIG TREE

fruity

This warmth of fig wood, the freshness of its leaves  
and the milky sap prolong the pleasures of Philosykos.

# “GREY” WOOD FIRE

woody

A sophisticated accord of woods,  
as warm as an open fire.

# The Ritual

diptyque has nurtured its own ritual to unleash the scents of its candles: The wax is tapped from the glass on a cushion to release the fragrance. That is how to catch a glimpse of the fragrance that the candle will set free once you light it.

## Precautions & Instructions

Here are a few tips to enjoy your scented candle safely, for a long time, without altering its quality (this candle will burn for approximately 90 hours):

- Let it burn for at least one hour to let the wicks soak up the paraffin and burn properly. Doing this will form a homogeneous melting pool and avoid the wax hollowing out later on.
- Regularly re-centre and trim the wicks with special wick-trimmer once you blow them out.
